

### PACSA Monthly Food Price Barometer: MARCH 2016

## **MEDIA STATEMENT**

# March 2016 food price inflation: affordability crisis drives vegetable prices down.

The cost of the PACSA food basket increased by 14.5% (R237) year-on-year, from R1 632.85 in March 2015 to R1 869.39 in March 2016. The impact of the drought on the food baskets of low-income households emerged strongly from November 2015: over the last five months food price inflation increased by 13.4% or R221 (see Figure 1). The increases on the food basket have been substantial, with increases of R66 in December 2015, R83 in January 2016 and R82 in February 2016. In comparison, the previous year's inflation for the same 5-month period from November 2014 to March 2015 was 5.3% or R82. The rand-value for the previous year's 5-month period combined was the same amount as the inflation seen over just one-month, on the February 2016 basket.

Figure 1: Cost of PACSA food basket year-on-year:
March 2015-March 2016.

The month-on-month data shows a slight drop-off in price of -0.52% or R9.85 on the PACSA food basket. Whilst the price of the starches,

particularly maize meal continue to increase (R9.50 on a 25kg bag); the basket dropped on the back of a steep decline in the prices of most vegetables (-R30.52). The decrease in the vegetable price was an artificial one, driven by a drop in demand for vegetables on the supermarket shelves. Consumers, under financial stress, switched from the supermarket to street traders where vegetables were available for purchase in smaller volumes and could be individually handpicked. The drop in demand on the supermarket shelf (caused by the affordability crisis in the pockets of the target market); forced the vegetable prices (perishable foods) down as an attempt to push-up demand. The data shows that between February 2016 and March 2016, the price of a 10kg pocket of potatoes had dropped by -15% (from R70.63 to R60.32); tomatoes (3kg) dropped by -25% (from R47.39 to R35.38); and onions (10kg pocket) dropped by -14% (from R59.16 to R50.66). Despite attempts by the supermarkets to induce demand; consumers could still not afford the reduced prices. A handful of supermarkets were found to be removing over-ripe tomatoes and green, sprouting potatoes from their shelves. The significant price drop of vegetables in our barometer is a sharp reflection of how the affordability crisis in low-income households is now resonating in supermarkets which target the low-income retail market. It suggests that elasticity around food prices, particularly perishables has declined steeply.

Households on low incomes are unable to absorb price increases by spending more money; instead they cut back or stop buying certain foods. Table 1 shows that substantial hikes in staple foods (esp. maize meal, rice, cake flour, sugar and oil) are happening concurrently with increases in the traditionally more affordable proteins (sugar beans and Maas) and vegetables. Households on low incomes prioritise the purchase of staple non-perishable foods before perishable, typically more nutritionally-rich, foods because the former provide at least the basic energy requirements, whilst ensuring palatability and enabling food to be prepared (sugar, oil and salt). Non-perishable foods are more price elastic because they must be secured. Perishables, on the other hand, are secured later (if at all/or in less quantities) and are less price elastic. Because the staple foods are experiencing high levels of inflation, these foods are taking up a larger portion of the low food budget and resulting in

<u>Table 1:</u> Cost/inflation of a selection of foods in the PACSA food basket from November 2015 to March 2016.

Foods tracked	Quantity tracked	Nov_2015	Mar_2016	Nov_2015_Mar 2016 (R )	Nov_2015_Mar 2016 (%)
Maize meal	25kg	R 181.81	R 209.66	R 27.85	15.3%
Rice	10kg	R 68.82	R 79.82	R 11.00	16.0%

Potatoes	10kg	R 35.00	R 60.32	R 25.32	72.3%

fewer monies to purchase the other foods (such as vegetables), which are similarly increasing in price.

Food – good nutritious food – which includes perishable and non-perishable foods, is however not a commodity; it is the basis of human life. Everything comes from the body and the picture that is emerging is showing that the health and well-being of a large number of our populace is under severe threat as dietary diversity declines. The drought that we are seeing (fully anticipated), similarly with other economic and political shocks, are however something which we should normally expect in a national and global context of flux and uncertainty. However, what is not normal is where the majority of South Africans find themselves today – in situations where there is very little or no resilience to absorb these crises. Households already underspend on food by 56% and have to take on debt every month to cover food shortfalls. The food price crisis provides the space to start thinking differently, not only about food prices or how our agricultural system is structured; but it also forces us to look more critically at our economy, and what it means if our economy cannot provide food for its people?

Monthly cos	Monthly cost of PACSA food basket			R 1 797.04	1	R 1 879.24	1	R 1 869.39	-R 9	.85

The price of the PACSA food basket decreased by R9.85 or -0.52% from its February price of R1 879.24 to R1 869.39 in March 2016.

## What is the PACSA Food Basket?

The PACSA Food Basket is an index for food price inflation. It provides insight into the affordability of food and other essential household requirements for working class households in a context of low wages, social grants and high levels of unemployment.

The PACSA Food Basket tracks the prices of a basket of 36 basic foods which working class poor households, with 7 members, said they buy every month (based on conversations with women). The food basket is not nutritionally complete; it is a reflection of reality - what people are buying. Data is collected on the same day between the 21st and 24th of each month from six different retail stores which service the lower-income market in Pietermaritzburg, KwaZulu-Natal. Women have told us that they base their purchasing decisions on price and whether the quality of the food is not too poor. Women are savy shoppers and so foods and their prices in each store are selected on this basis. The PACSA Food Basket tracks the foods working class households buy, in the quantities they buy them in and from the supermarkets they buy them from. PACSA has been tracking the price of the basket since 2006. We release our Food Price Barometer monthly and consolidate the data for an annual report to coincide with World Food Day annually on the 16th October.

## What is the PACSA Minimum Nutritional Food Basket?

The PACSA Food Basket is assessed every 3 years to see if the foods and the quantities of these foods in our basket are still being purchased by women living in working class poor families. Consistent with previous assessments women told us that purchasing patterns change in response to affordability. Last year however we noticed a significantly starker change in purchasing patterns due to much steeper increases in electricity and transport coupled with higher food prices. The foods women identified as being in their trolleys were increasingly limited in their diversity. Some nutritionally-rich foods such as high quality proteins and calcium and vegetables were dropping out of their trolleys altogether or being reduced. Similarly, women told us that they were buying starches in greater volumes and switching to cheaper meats as well as buying more sugar, salts and fats.

# March 2016 PACSA Monthly Food Price Barometer

### What is the PACSA Minimum Nutritional Food Basket? (continued)

Because households are forced to buy foods with poorer nutritional value; the gap between what households are buying and what they would like to and indeed should be buying for basic nutrition is widening. In early 2014 PACSA, in consultation with a Registered Dietician, formulated a Minimum Nutritional Food Basket. The rationale was to keep tracking what households are actually able to afford to buy but not to lose sight of the actual cost of foods required in terms of balanced nutrition, in order to grow and develop properly. The PACSA Minimum Nutritional Food Basket provides data on which we can start talking realistically about adequacies in wages and social grants and ensures that current food expenditure patterns are not conflated with the food expenditure required to secure a nutritional basket of food.

The PACSA Minimum Nutritional Food Basket includes a greater variety of nutritionally-rich foods to provide a family with a basic but nutritionally complete monthly diet. The basket can be amended to respond to families of various sizes, ages and lifestyles through its connection to 4 energy groups. Food price data for the PACSA Minimum Nutritional Food Basket is collected with the PACSA Food Basket and conforms to the same methodology. The full report and methodologies on which the PACSA Minimum Nutritional Food Basket is based is accessible off www.pacsa.org.za.

TABLE 3: Monthly costs of PACSA Minimum Nutritional Food Basket for families of various sizes, ages and life stages for March 2016

Total family size		4	5	7
Number of adults and children in family		2 Adults and 2 Children	3 Adults and 2 Children	3 Adults and 4 Children
	Energy group 1	2 children (3-9 years)	1 child (3-9 years)	2 children (3-9 years)
	5 2	Nana	1 child (10-13 years)	1 child (10-13 years)
Ages and lifestages of family	Energy group 2	2 None	1 elderly woman	1 elderly woman
members	5 2	1	1	1 girl (14-18 years)
	Energy group 3	1 very active woman	1 very active woman	1 very active woman
	Energy group 4	1 very active man	1 very active man	1 very active man
Number of members in Energy group 1: 6 500 kJ		2	1	2
Number of members in Energy group 2: 8 500 kJ		0 2		2
Number of members in Energy group 3: 10 500 kJ		1	1	2
Number of members in Energy group 4: 12 000 kJ		1	1	1
Total cost of food to meet basic nutritional requirements per family per month:		R2 414.01	R3 053.86	R4 228.38

**TABLE 3** provides an example of how the data in the PACSA Minimum Nutritional Basket can be used. By changing family member variables and linking these variables to the energy groups, it is possible to calculate the monthly costs of a basic but nutritional basket of food for any family.

CPI data sourced from: Statistics South Africa. Consumer Price Index. http://www.statssa.gov.za/publications/P0141/P0141February2016.pdf

#### **Key indicators**

The Consumer Price Index (CPI) is a national measure of inflation compiled by STATSSA. It is a measure of average price changes for consumer goods and services. South Africa's CPI is used to measure inflation for macroeconomic analysis and monetary policy and is used as the basis for wage negotiations and adjustments to social grants.

The CPI is constructed on a range of expenditure levels and spending patterns. Because all South African data is skewed by our extreme structural inequality, national measures tend to capture the middle – the middle is not the majority. The CPI approximates the expenditure of households that spend R12 900 a month. Similarly the weighting given to the 12 categories making up the total CPI basket do not capture the reality of the majority of our people. Workers earning low wages spend money on fewer items in the CPI basket and the proportion of money spent on these items is higher e.g. food, transport and electricity account for ± 90% of the expenditure for the majority of Pietermaritzburg low-income households. In the CPI however; food, transport and electricity are weighted at less than 50% of the total basket of household expenditure.

The PACSA Food Price Barometer tracks the expenditure patterns specifically of low-income households. It tracks the foods low-income households actually buy and the supermarkets low-income households buy from. Because our data is specifically focused on working class poor households, it is able to capture the reality of food price inflation for low-income households.

**TABLE 4** presents the CPI-headline inflation (the full basket making up the CPI), the CPI-food component (just the food and non-alcoholic beverage category) and the PACSA food price barometer. Comparing CPI with CPI-food is useful because food prices typically drive overall inflation; and wages and social grant increases are often granted on CPI-headline inflation and not CPI-food. This distinction is important because food price inflation is borne highest by low-income households because most household monies are spent on food. Similarly comparing CPI-food with the PACSA food price barometer is useful because our barometer specifically shows the impact of food price inflation for poor working class households. Hence although both indicators will follow similar trends, the PACSA food price barometer provides a starker indication of the immediate reality of food price inflation.

**TABLE 5: Key commodities.** 

Commodities	Nov_2015	Dec_2015	Jan_2016	Feb_2016	Mar_2016
Exchange rate	R 13.89	R 14.38	R 16.00	R 15.88	R 15.67
Oil price per barrel (\$)	\$47.93	\$43.74	\$37.53	\$35.13	\$38.32
Petrol (Inland) per litre	R 12.08	R 12.09	R 12.09	R 12.15	R 11.46
Diesel (Reef) per litre	R 10.84	R 10.81	R 10.05	R 9.43	R 9.58
RSA White Maize per ton	R 3 200.00	R 3 478.00	R 4 670.00	R 4 972.00	R 4 917.00
RSA Yellow Maize per ton	R 2 995.00	R 3 396.00	R 3 700.00	R 3 947.00	R 3 359.00
RSA Wheat per ton	R 4 301.00	R 4 530.00	R 4 866.00	R 4 660.00	R 4 689.00
RSA Soybeans per ton	R 5 670.00	R 6 085.00	R 5 149.00	R 6 830.00	R 6 400.00

### **Commodity prices**

Most of our food is planted for profits and not for the plate. Analysing food prices is difficult because we need to consider the logic of the market and not a logic which would follow if food was grown for people. Most of the food on supermarket shelves is grown through agroindustrial methods. The crude oil price and exchange rate are key drivers of food prices locally. Our basic staple foods are commodified and speculated upon on international markets. The price of maize meal in our local supermarket tracks international commodity prices e.g. if the price per tonne of USA maize increases then South African farmers may choose to export their harvest to make more profits, so the price of local South African maize increases.

**TABLE 5** includes some of the core drivers of food price inflation as well as our core staple foods subject to international commodity speculation.

# March 2016 Affordability tables

TABLE 6: Income and expenditure for households of various socio-economic scenarios March 2016.

Household socio-economic scenarios	Household A	Household B	Household C	Household D	Household E
Total household income	R 1 420.00	R 2 362.00	R 3 200.00	R 4 660.00	R 8 000.00
Number of household members	5	5	5	5	5
MINUS MINIMUM NUTRITIONAL food basket	R 3 053.86				
Monies left over AFTER FOOD to buy some essential household requirements*	R -1 633.86	R -691.86	R 146.14	R 1 606.14	R 4 946.14
MINUS Burial insurance	R 200.00				
MINUS Electricity and water	R 589.95				
MINUS Transport	R 660.00				
MINUS Education	R 500.00				
MINUS Communication and media	R 150.00				
MINUS Clothing and footwear	R 416.66				
MINUS Domestic & household hygiene items	R 552.93				
MINUS Cultural obligations	R 350.00				
Monies left over AFTER FOOD & SOME ESSENTIAL HOUSEHOLD REQUIREMENTS secured	R -5 053.40	R -4 111.40	R -3 273.40	R -1 813.40	R 1 526.60

<sup>\*</sup> Please note expenditures in Table above exclude monies for debt repayments, health care, education, rent, emergencies, amongst others.

## Food price affordability

**TABLE 6** shows the impact of low incomes and high food and other essential goods and service costs on the ability of households with different incomes and socio-economic scenarios to secure food. Please refer to Appendix 1 for the justification of income, household size, food indicator, and quantity and value of goods and services presented in the table above. All figures are purposive to present a realistic picture of the socio-economic situation affecting a wide range of low-income households and the costs of goods and services in Pietermaritzburg.

South Africans are net buyers of food. Supermarkets are the main source of food for the majority of households. Food availability is not generally a problem. We have enough food. The problem is food price affordability. We do not have enough money to buy the food we need. Food insecurity therefore has its basis not in agriculture but is caused by economic and political choices.

For households living on low incomes, food expenditure is not the first priority. Households typically prioritise the non-negotiable expenses before food – such as those expenses which incur penalties for non-payment (e.g. household debt repayments) and those that simply have to be paid (e.g. transport to work, electricity and burial insurance). Food is one of the few expenses which households are able to control. To analyse food price affordability we therefore need to consider not only the level of wages and social grants but also the inflation on other non-negotiable goods and services as well as that of food.

TABLE 7: Comparing PACSA Monthly Food Basket with PACSA Monthly Minimum Nutritional Food Basket.

PACSA Food Baskets	Cost of Basket for household size of 7
PACSA Monthly Minimum Nutritional Food Basket	R 4 228.38
PACSA Monthly Food Basket	R 1 869.39
Difference between Baskets	R 2 358.99

## How affordability affects nutrition

Food is typically one of the few expenses which low-income households are able to control and because of this other non-negotiable expenses take precedent. This is the reason why we tend to see such low expenditure on food. It is not because that expenditure is what households' reasonably need to or wish to spend to secure sufficient quantities of a diverse range of food for adequate nutrition; it is because this is the amount of money households are able to spend on food.

**TABLE 7** shows the severity of the impact of food price affordability on household nutrition when comparing the PACSA Food Basket to the PACSA Minimum Nutritional Food Basket. Low-income households are not able to secure sufficient nutritious food to ensure minimum nutrition, health, well-being and productivity.

<sup>\*\*</sup> Our research in Pietermaritzburg has shown that a household of five needs at least R8 000 a month to afford the expenditures that allow a family to live at a basic level of dignity (see "Household E").

# Appendix 1: Notes and References for Affordability Table 6

#### Total household income

We have selected 5 total household income scenarios:

**Household A:** R1 420 = 1 old-age pension (National Treasury, 2015. Budget Speech: 13).

**Household B:** R2 362 = the average minimum wage set by the Employment Conditions Commission across sectoral determinations for 2014 was R2362.36.

Household C: R3 200 was selected because 60% (98 680) of all Pietermaritzburg households earn between zero and R3200 a month (STATSSA, Census 2011). This total household income figure provides for 1 employed member receiving

month), see URL

http://www.mywage.co.za/main/salary/minimu m-wages) with the additional income found by unemployed members through alternative and insecure means.

minimum wages (earning R1200 - R2000 a

**Household D:** R4 660 is the average monthly consumption expenditure for Black South African Households (STATSSA, 2012).

Household E: R8 ooo is where we think the national minimum wage should be located if households are to have the possibility of accessing a basic level of dignity.

#### **Burial insurance**

This figure of R200 presents basic family burial insurance costs for a low-income household registered with insurance companies which serve the low-income market (2015). Burial insurance has been included as an essential and prioritised expense because interviews with households reveal that burial insurance is typically paid before any other expense and very seldom defaulted as a mechanism to ensure food is secured.

## **Electricity and water**

The *electricity* cost is calculated on 350kWh per month. This is the average consumption for low-income households in Pietermaritzburg. We use the prepaid electricity tariff of R1.45 per kWh because prepaid meters are installed in the homes of low-income households. The 2015/16 rand value is R507.50 per month (excluding transport and time costs of buying tokens). Households on prepaid meters in Pietermaritzburg are excluded from accessing free basic electricity.

The water expense is calculated on a fixed monthly charge for a non-metered household. This is a typical scenario for low-income households living in RDP housing in Pietermaritzburg. The 2015/16 charges on an unmetered water supply is R82.45 per month (includes VAT). The figure in the table (R589.95) is the sum of electricity and water.

#### **Transport costs**

The transport cost is calculated for a household living outside the CBD, given that apartheid geography has not changed and low-income Black African households still live outside the CBD and far from places of work. It is calculated on 1 kombi trip at R11 or R22 return (Pietermaritzburg kombi charges, July 2015).

The R660 is calculated as follows: 20 trips to work [20 X R22 = R440] + 5 trips to town for work/study /shopping/church etc. [5 X R22 = R110] + 1 long distance trip (we use Durban as the destination) [1 X R110].

#### Education

This figure has been derived from a focus group (2015), it has its basis in the experience of women with children; it provides the possibility for stationery (± R500 per annum); Carlton paper and toilet paper (R50 once or twice a year); School fees (± R250 once or twice a year); School computer access (± R100 a month); contribution to transport costs.

### Communication and media

This figure is arbitrary; it provides R150 per household per month – for newspapers, airtime, photocopying etc.

## Clothing and footwear

This figure is arbitrary; it provides roughly R1 000 each for each member in a family of five. The annual figure of R5000 is divided by 12 months to give R416.66 per household per month. Note that for children, the R1 000 allocated may cover school clothes and shoes for a year but will exclude other clothes worn at home.

## Domestic and household hygiene products

This figure presents the monthly price of personal and domestic hygiene products tracked through PACSA's monthly barometer.

Personal hygiene products tracked include: toilet paper [1ply x 20 rolls], bath soap [200g x 6], toothpaste [100ml x 3], sanitary pads [pack of 10 x 2], Vaseline [250ml x 2], face & body cream [big bottle x2], roll-on [normal x 4], spray deodorant [big sprays x2], shoe polish [100ml x1].

Domestic hygiene products tracked include: dishwashing liquid [750ml x1], washing powder [2kg x1], green bar soap [bars x4], toilet cleaner [750ml x 1], kitchen cleaner [750ml x1] and jik [750ml x1].

# **Cultural obligations**

This figure is arbitrary; it provides R350 per month - includes monies for contributions to funerals, weddings, religious and cultural ceremonies, and possible intra and inter family and community financial assistance.

## **About PACSA**

The Pietermaritzburg Agency for Community Social Action (PACSA) is a faith-based social justice and development NGO that has been in operation since 1979. PACSA operates in the uMgungundlovu region of KwaZulu-Natal, South Africa and focusses on socio-economic rights, gender justice, youth development, livelihoods and HIV & Aids. Our work and our practice seek to enhance human dignity. We are convinced that those who carry the brunt of the problem must be a part of the solution – at the heart of PACSA's core strategy is the notion "nothing about us without us."
