## Foreword

The Women and Men in Kenya booklet provides facts and figures on the status of women and men in Kenya.

The booklet represents indicators focusing on the following: population, health, education, employment, governance, domestic violence, decision-making, and Persons with Disabilities (PWDs).

The information is extracted from various publications produced by the Kenya National Bureau of Statistics, State Department of Basic Education and National Gender and Equality Commission (NGEC).

I hope the facts and figures in this booklet will be useful in strengthening the production of gender statistics in Kenya.

**Zachary Mwangi**  
**DIRECTOR GENERAL, KNBS**

## **Vision, Mission and Mandate of KNBS**

### **Vision**

“To be a centre of excellence in statistics production and management”

### **Mission**

“To effectively manage and coordinate the entire National Statistical System to enhance Statistical Production and Utilization”

### **Mandate**

The KNBS is mandated by law (Statistics Act 2006) to collect, analyze and disseminate socio-economic statistics needed for planning and policy formulation in the country.

## Concepts and Definitions

### Gender

Gender is a socio-cultural construct of the society that determines and identifies, roles or functions, entitlements and deprivation of women and men and girls and boys in the society. Gender classification changes with time, space and needs of a society.

### Sex

Sex is a biological identification of females and males based on their physiological characteristics. Sex characteristics are natural; compared to gender which identifies qualities that are shaped through the history of social relations and interactions.

### Gender Equality

Gender equality refers to equal access to resources and benefits by women and men. This accelerates the growth of individuals, development of countries and evolution of societies.

### Gender Equity

Gender equity denotes the equivalence in life outcomes for women and men, recognizing their different needs and interests and requiring a redistribution of power and resources.

### Gender Mainstreaming

This is an organizational strategy to bring a gender perspective to all aspects of an institution's policy and activities, through building gender capacity and accountability.

### Gender Discrimination

This is the systematic, unfavorable treatment of individuals on the basis of their gender which denies them rights, opportunities or resources.

## **Gender Violence**

Any act or threat inflicted on individual of either sex. It may be in the form of physical, sexual or emotional/psychological act.

## **Women's Empowerment**

This is a bottom-up process of transforming gender power relations through individual or groups developing awareness of women's subordination and building capacity to change it.

## **Gender Equality in Kenya**

Kenya's economy is growing. Poverty is declining and devolution is bringing government closer to Kenyan citizens. The benefits of growth are not always equally shared, however, and Kenyan women still remain disadvantaged economically, socially and politically. Promoting gender equality involves working with women and men, girls and boys to bring about changes at home, in the workplace and in the community.

Traditional ideas and roles assigned to girls and women restrict them from taking part in areas that are key in both economic and social development. These ideas hold women back from contributing to important development goals; especially in the areas of economic growth, nutrition and food security.

Women in Kenya are underrepresented in decision-making positions. They also have less access to education at higher level, land, and employment. Those living in rural areas spend long hours collecting water and firewood; interfering with school attendance and leaving them with little time to earn money or engage in other productive activities.

The untapped potential of women and girls is gaining greater attention in Kenya. The country's new Constitution, promulgated in 2010, provides a powerful framework for addressing gender equality. It

marks a new beginning for women's rights in Kenya; seeking to remedy the traditional exclusion of women and promote their full involvement in every aspect of growth and development.

When Kenyan women get the freedom to reach their potential, all Kenyan families and communities will grow stronger. Empowering women to exercise their rights is guaranteed by the Constitution. It is important to bring the perspectives of women and girls and their full participation to the frontlines; and men and boys are important partners in this effort.

## **Economic Growth and Natural Resources**

Women provide 80 percent of Kenya's farm labor and manage 40 percent of the country's smallholder farms, yet they own only roughly 1 percent of agricultural land and receive just 10 percent of available credit. Feed the Future resources focus on innovations in agricultural labor-saving technologies and practices to reduce women's labor burden, linking women to extension services, markets and private enterprises and introducing alternative livelihoods in the pastoral areas. The result is economically empowered women, improved household nutritional status, and women farmers applying new technologies or management practices, savings accounts or insurance policies. Women are on the front line of conserving Kenya's resources and rejuvenating its degraded landscapes. Many women now have a greater say in the management of natural resources through their participation in community-resource governance structures, such as water-user associations, community forest associations and community conservancies. Women are also running successful nature-based businesses and earning more through enterprises from natural products, eco-tourism, tree nurseries and traditional handicrafts. Productive engagement of women and girls in leadership positions and decision-making remains instrumental to improving natural resource management and household livelihoods while curbing conflict.

## **Improving Maternal and Family Health**

The introduction of free maternity services by the Government of Kenya has removed financial barriers and opened access to care for most expectant mothers. To complement this policy, Ministry of Health in collaboration with development partners provide essential maternal and child health commodities, training and supportive supervision to health facilities and health workers, to better equip them to provide quality obstetric care.

## **Women's Political & Civic Participation**

Devolution has created greater opportunities for women's participation in governance and decision-making. A number of programmes have been put in place to increase women's participation in local government and deepening their understanding of their responsibilities as elected officials. This has strengthened the voice of women in leadership positions; empowering men and women through civic education and public discussions. More than a half of women's civil-society networks remain active as community-level civic educators advocating for gender-sensitive budgeting at the local and county levels. These efforts have built stronger relationships between the community and local government officials while addressing specific policy needs of women and girls. Efforts are in place to advance advocacy and strengthen local civil society organizations to demand for accountability from the political and public leadership on implementing the constitutional provisions on gender equality.

## **Gender Equality and Statistics**

Women and men should be visible in statistics. For this to be possible, statistics must be disaggregated by sex. This gives a clear picture of the real situation as it is on the ground through the available data and showing existing gaps.

## **Important dates for women in Kenya since 1950s**

- 1952 First African women's organization formed (MYWO)
- 1955 First group of women admitted to University of Nairobi
- 1958 First African woman joins the Legislative Council
- 1959 First African woman becomes president of the giant MYWO
- 1960 First African woman ventures into broadcasting
- 1961 First African woman attends the Lancaster constitutional talks in London
- 1963 Women given the right to vote
- 1964 First group of African women joins the trade union movement
- 1964 Equality opportunity act established
- 1964 Maternity leave granted for women
- 1964 Basic pension adopted for women
- 1967 First woman magistrate appointed
- 1968 First woman appointed mayor
- 1969 First woman becomes Member of parliament
- 1969 First woman appointed District Officer
- 1971 First woman in East and Central Africa earns PHD
- 1974 First woman appointed Assistant Minister
- 1976 Establishment of the Women's Bureau
- 1982 Appointment of the First woman judge to the High Court of Kenya
- 1983 First women appointed to head public parastatal

- 1984 First woman Ambassador appointed
- 1986 First woman elected as clergy (PCEA)
- 1986 First woman appointed to senior diplomatic mission
- 1987 First woman Permanent Secretary
- 1993 House allowance granted to women in the public sector
- 1995 First woman appointed to the cabinet
- 1995 First female Kenyan pilot
- 1997 First woman vies for presidency
- 1999 First woman appointed Provincial Commissioner
- 2004 First African (Kenyan) woman to qualify to captain a commercial aircraft.
- 2005 First woman appointed to chair WTO's general council
- 2013 Appointment of first woman as deputy inspector General of police.
- 2017 First Three Women elected as Governors
- 2017 First Two Women elected as Senators
- 2017 Kenyan government adopts the basic education amendment bill that was signed into law making it mandatory for the government to supply free, sufficient and quality sanitary towels to every girl child registered and enrolled in a public basic education institution.

## Guide for readers

The information in this booklet has been primarily extracted from the Kenya National Bureau of Statistics publications, other government departments and agencies. The sources are acknowledged beside each table or graph.

Most tables and graphs provide absolute numbers and/or proportions (%) for certain attributes for both women and men; girls and boys

Some charts and graphs reflect both the absolute numbers and sex distribution for various groups. The total figures in the tables are not always in agreement with the partial figures because of rounding off.

Some tables are based on regions (former provinces)

For information on data quality, please refer to the sources quoted.

## Population

The population figures are extracted from the Population and Housing Censuses which have been carried out in Kenya every ten years since 1969.

The Kenyan population has risen steadily in recent decades. The proportion of men and women has been roughly the same throughout the years, with women being marginally higher than men in the population.

### Change in population, 1969-2016

*Distribution of Population in millions*

## Population by selected groups, 2016

*Numbers in thousands*

<b>Age-group</b>	<b>Female</b>	<b>Male</b>
0-4	3,526	3,582
3-5	2,077	2,118
6-13	4,668	4,749
14-17	1,965	2,051
15-19	2,380	2,456
15-34	8,340	7,923
15-64	12,735	12,302
15-49	11,343	10,929
65+	798	677

Source: 2009 KPHC Analytical Report on Population Projections, 2012

The selected age-groups are categorised as follows; under five years where nutrition and immunization are very key. The next age-group is for children eligible for Early Childhood Development Education (ECDE) followed by primary school going age, secondary and teenage (15-19). The women in reproductive age group (15-49) are key for improvement in maternal health care and economically active age group (15-64) denotes the work force of the country. The number of the elderly persons also need to be known in order to be supported to cope up with life.

## Life expectancy in Kenya, 1969-2014

### *Trend in life expectancy*

Source: Kenya Demographic and Health Survey, Various Editions

## Health

Information on health is important for the government and other service providers to plan for the various health needs of the population. It is also necessary in monitoring progress in achieving the set targets such as, immunization for children and assistance during delivery and place of delivery for expectant mothers among others.

## Infant Mortality Rate

*The probability of a child dying before reaching the age of one per 1,000 live births*

Source: Various Kenya Demographic and Health Surveys

## Under five mortality rate, 1993-2014

*Probability of a child dying before reaching the age of five per 1,000 live births*

Source: Kenya Demographic and Health Survey, various editions

## Maternal Mortality Ratio

*Number of women who die as a result of complications of pregnancy or childbearing in a given year per 100,000 live births*

Source: Kenya Demographic and Health Survey, various editions

## Place of Delivery

### Percentage distribution of live births by place of delivery, 2014

*Proportion of deliveries in public/private health facilities and at home*

Source: Kenya Demographic and Health Survey, 2014

### Percentage distribution of live birth by place of delivery, and region, 2014

*Proportion of deliveries in public/private health facilities and at home*

Background characteristics	Public Sector	Private sector	Home	Other
Coast	48	10	41	1
North Eastern	26	3	69	1
Eastern	45	18	35	2
Central	64	26	9	1
Riftvalley	39	12	49	1
Western	41	6	51	1
Nyanza	55	10	33	1
Nairobi	50	39	10	1
Total	46	15	37	1

Source: Kenya Demographic and Health Survey, 2014

Although most of the deliveries take place in public health facilities, still a large proportion of child deliveries take place at home.

## Child Nutritional Status

Child nutritional status is an important indicator as this gives a clear indication of socio-economic status of the country.

**Height-for-age** (Stunted) index provides an indicator of linear growth retardation and cumulative growth deficits.

**Weight-for-height** (Wasted) index measures body mass in relation to body height or length and describes current nutritional status.

**Weight-for-age** (Under-weight) is a composite index of height-for-age and weight-for-height. It takes into account both chronic and acute malnutrition. Children whose weight-for-age is below minus two standard deviations (-2 SD) are classified as underweight. Children whose weight-for-age is below minus three standard deviations (-3 SD) are considered severely underweight

## Undernourished Children, 1993-2014

*Percentage of children under five who are undernourished*

Year	Stunting		Wasting		Underweight	
	Female	Male	Female	Male	Female	Male
1993	30	36	5	6	20	24
1998	31	35	6	6	22	22
2003	28	33	5	6	18	22
2008/09	33	37	6	8	15	17
2014	22	30	4	4	10	12

Source: Various Kenya Demographic and Health Surveys

## Non-Communicable Diseases

Non-communicable diseases (NCDs), which are also known as chronic diseases, are those conditions that are usually not passed on from one affected person to others. They are of long duration and generally slow progression. Risk factors which are the main drivers of these diseases are tobacco use, unhealthy diets, insufficient exercise and alcohol misuse. The main types of noncommunicable diseases are cardiovascular diseases (like heart attacks and stroke), cancers, chronic respiratory diseases (such as chronic obstructed pulmonary disease and asthma) and diabetes.

In Kenya, breast and cervical cancer are the leading cause of cancer deaths in women, and prostate cancer is the top cause of cancer deaths in men. Living a healthy lifestyle free from communicable and non-communicable diseases and free from use of destructive substances is very important for well-being of the country's population.

### Women age 15-49 examined for breast cancer by Age Group

*Percent distribution of self and medical personnel examination*

Age Group	Performed self examination	Examination performed by a medical personnel	examination by both self and medical personnel
15-19	14	3	3
20-24	23	12	8
25-29	30	17	13

## Work and Employment

The section presents information on employment in different sectors. Disparity in employment between women and men still exists despite some improvement being seen in recent years.

There seems to be a significant proportion of more men than women employed in majority of the sectors, such as the agricultural and the manufacturing sectors as shown below. The wage employment becomes more even for education and social activities. This indicates that women work less in formal wage employment than men.

## Modern sector employment, 2010-2016

*Numbers in thousands and Sex Distribution (%)*

Year	Women	Men	Sex Distribution (%)	
			Women	Men
2010	591	1469	29	71
2011	657	1427	32	68
2012	789	1367	37	63
2013	838	1446	37	63
2014	942	1429	40	60
2015	920	1558	37	63
